

Murals and wallpaper

Description

Murals are ideal for creating atmosphere and livening up ordinary bland spaces. Photographs and patterns can be printed to add interest to an office wall, work space or cafeteria. Murals can be generated to highlight products for showrooms or retail spaces. Continue brand consistency through your premises with custom designed and printed theming for all surfaces. Murals are suitable for interior or exterior application. Size is no obstacle, our printers can cater for the smallest to largest of requirements. Any space can incorporate a mural and they don't all have to be permanent. If it's only a short term project we can produce murals on cost effective materials which have a clean and easy removal.

- C** Display panel
- D** Frosting

Techniques

Wallpaper

A pre-pasted plain wallpaper product which you hang like standard wall paper. Can be re-wet and removed when required.

Self Adhesive Vinyl

Ideal for both long and short term use on new or existing walls. These films come in a textured, matte and gloss finish. Frosted and clear films are an alternate option for glass walls.

PVC Banner

PVC banner is great for cost effective indoor murals. It can be stretched around frames or over panels to create murals of any size. It's a good option where your wall surface is uneven.

Fabrics

These materials, some including adhesive backings, are used when a textured finish is required. They can give a more up-market appearance.

Solid Panels

Direct printing or applying vinyl to panels is another alternative where walls are not suitable for wallpaper or adhesive films.

Frosting / Etching

These self adhesive films are a cost effective way to decorate glass and windows and provide privacy. Typically decorative borders are used for health and safety compliance, but these can incorporate company logos or designs to match branding. Frosted films come in colours and can also be printed in full colour. Full windows can be covered.

Window Films

Ideal where you need an image on a window for short term promotions or permanent installations. We provide vinyl cut lettering or digital full colour graphics to any size.

One Way Window Film

This film is more popular with vehicle graphics, but is equally effective on building windows. It works when the light source outside is brighter than that inside. The image is seen by those on the street while a clear view out is visible from inside.
