

Signage and installation

Signage

Our sign shop is backed by a team with expert knowledge and skills. We provide quality products and first class customer service. We cater for all signage requirements from single signs to large projects over multiple locations. We adhere to local by-laws, use traffic management systems and are an active member of Site Safe ensuring all legal health and safety responsibilities are met.

Digital plotting

Digital printing has provided a means for producing amazing signage products, but digital plotters still play a big role in producing cost effective signs and graphics. Most commonly referred to as computer cut vinyl, it's a process of cutting design elements from sheets of coloured sticky vinyl which are then applied to the sign substrate, from sign panels to vehicles.

3D profile cutting

Digital profile cutting can be achieved in many ways - laser cutting, routing and hot-knifing to name a few. We produce many dimensional products for indoor and outdoor use. Typical substrates are polystyrene, foam PVC and aluminium composite panel. To further enhance your job, lighting can be incorporated to the design. This could be through back-lighting, illumination or edge-lighting.

Installation

Our experienced installers do the final stage of the brand and imaging process. A quality install ensures your graphics look their absolute best. While in your environment, they operate in a polite and professional manner ensuring minimal impact while installing your graphics. We adhere to health and safety requirements and use traffic management plans where necessary.
